

SuggaPlay Editorial Design Bible

Version 1.0 – Primary design reference for AI-assisted development in Cursor.

1. Vision

SuggaPlay should feel like a premium fashion publication disguised as a social platform. Every interface should feel art directed rather than template driven.

2. Core Principles

1. Editorial before product.
2. Photography is the hero.
3. Typography creates hierarchy.
4. White space is intentional.
5. Every screen feels collectible.
6. Function never compromises aesthetic.

3. Visual DNA

Influences include high-end fashion magazines, gallery catalogues, minimalist portfolio sites and Swiss graphic design. Avoid generic startup aesthetics.

4. Colour System

Primary colours: Black #000000 and White #FFFFFF. Accent: Electric Red #FF2747 only for high-value actions. Greys should be neutral.

5. Typography

Display: Large grotesk type (Geist/Inter/Suisse style).
Headlines: Bold, oversized, tight leading.
Body: Small and restrained.
Uppercase only for navigation, labels and section titles.

6. Grid & Layout

12-column responsive grid.
Desktop max width 1440–1600px.
Generous margins.
Large vertical rhythm.
Prefer asymmetry with precise alignment.

7. Spacing

Base spacing scale: 4, 8, 12, 16, 24, 32, 48, 64, 96, 128 pixels. Never crowd content.

8. Imagery

High-end editorial photography. Large crops. Black and white preferred. Images may overlap typography.

9. Motion

Subtle fades, reveals, parallax and page transitions. Motion should feel cinematic, never playful.

10. Buttons

Flat rectangles. No heavy shadows. Strong typography. High contrast.

11. Forms

Minimal input fields with clear labels. Validation should be elegant and unobtrusive.

12. Cards

Cards should resemble editorial layouts rather than SaaS widgets. Avoid unnecessary borders and radius.

13. Navigation

Minimal navigation. Plenty of whitespace. Persistent but visually quiet.

14. Profiles

Large hero image. Magazine-like composition. Bio and metadata secondary to photography.

15. Feed

Immersive visual feed with oversized media. Text kept concise.

16. Messaging

Luxury feel. Spacious conversation bubbles. Emphasis on imagery and readability.

17. Accessibility

Maintain WCAG AA contrast. Keyboard navigation. Semantic HTML. Visible focus states.

18. Responsive Rules

Design mobile first, then tablet, then desktop. Preserve editorial composition at every breakpoint.

19. Engineering Rules for Cursor

Always use reusable components.
Never introduce random colours.
Never use default Tailwind demo layouts.
Keep components modular.
Prefer composition over deeply nested components.
Use semantic HTML.
Keep styling tokens centralised.
Maintain consistent spacing.
Use Framer Motion sparingly.
Every new page must match this design system.

20. Anti-Patterns

Never imitate generic dashboards.
Never use colourful gradients by default.
Avoid excessive rounded corners.
Avoid clutter.
Avoid inconsistent typography.
Avoid multiple accent colours.

21. Definition of Done

A feature is complete only if it is functional, responsive, accessible, visually aligned with this document, and reusable.
